**A Guide to Substance Abuse Services for Primary Care Clinicians** Eleanor J. Sullivan, 1997 EXECUTIVE SUMMARY AND RECOMMENDATIONS: The goal of this TIP is to recommend guidelines for primary care clinicians to follow in caring for patients with alcohol and other drug use disorders. These guidelines were developed by a Consensus Panel of clinicians, researchers, and educators who work on the prevention and treatment of substance use disorders. Protocols are based partly on research evidence, partly on Panel members' clinical experience. The algorithm to the left follows a patient with substance use problems who presents in a primary care setting. The chart will serve as a guide or road map through screening, brief assessment, brief intervention, assessment, referral, specialized treatment, and followup care as they are detailed in the TIP. Since substance use disorders are often chronic conditions that progress slowly over time, primary care clinicians, through their regular, long-term contact with patients, are in an ideal position to screen for alcohol and drug problems and monitor each patient's status. Furthermore, studies have found that primary care clinicians can actually help many patients decrease

alcohol consumption and its harmful consequences through office-based interventions that take only 10 to 15 minutes (Kahan et al., 1995; Wallace et al., 1988). This potential, however, is largely untapped: Saitz and colleagues found that of a sample of patients seeking substance abuse treatment, 45 percent reported that their primary care physician was unaware of their substance abuse (Saitz et al., in press). Yet even though screening and limited treatment of substance use disorders do not require a large time investment, the Consensus Panel that developed this TIP recognized that many primary care clinicians are already overwhelmed by the demands imposed by expanded gatekeeper functions. The Panel realized that a practical approach to addressing patients' substance abuse problems was needed: one that recognized the time and resource limitations inherent in primary care practice and offered a series of graduated approaches that could be incorporated into a normal clinic or office routine. Biological, medical, and genetic factors as well as psychological, social, familial, cultural, and other environmental features all bear on substance abuse. Addressing the condition effectively requires a team effort, especially when it has progressed beyond the early stage. For this reason, in addition to screening and intervention treatment options, these guidelines include information about viable referral for assessment and treatment, as well as followup. Readers will notice that the TIP contains more information on alcohol use and abuse than on use of illicit drugs. This reflects both the scope of the problems and the research literature available about them. It is estimated that about 18 million people with alcohol use problems and 5 million users of illicit drugs need treatment. Although the Panel recognizes that tobacco is an addictive substance with a major public health impact, it is not included in this TIP because the topic falls outside CSAT's purview. Readers are referred to *Smoking Cessation: a Guide for Primary Care Clinicians*, published by the Agency for Health Care Policy and Research (Agency for Health Care Policy and Research, 1996). The Consensus Panel's recommendations are based on a combination of clinical experience and research-based evidence. In the list below, the summary guidelines supported by the research literature are followed by (1); clinically based recommendations are marked (2). Citations supporting the former are referenced in the body of the document. Screening and assessment instruments mentioned below are reproduced and discussed in Chapters 2 and 4 and Appendix C. The guidelines are presented in more detail in Chapter 6.

**TIP 35: Enhancing Motivation for Change in Substance Use Disorder Treatment (Updated 2019)** U.S.

Department of Health and Human Services, 2019-11-19 Motivation is key to substance use behavior change. Counselors can support clients' movement toward positive changes in their substance use by identifying and enhancing motivation that already exists. Motivational approaches are based on the principles of person-centered counseling. Counselors' use of empathy, not authority and power, is key to enhancing clients' motivation to change. Clients are experts in their own recovery from SUDs. Counselors should engage them in collaborative partnerships. Ambivalence about change is normal.

Resistance to change is an expression of ambivalence about change, not a client trait or characteristic. Confrontational approaches increase client resistance and discord in the counseling relationship. Motivational approaches explore ambivalence in a nonjudgmental and compassionate way.

*Comprehensive Case Management for Substance Abuse Treatment - TIP 27* U.S. Department of Health and Human Services, 2019-11-23 Case management has been variously classified as a skill group, a core function, service coordination, or a network of friendly neighbors. Although it defies precise definition, case management generally can be described as a coordinated approach to the delivery of health, substance abuse, mental health, and social services, linking clients with appropriate services to address specific needs and achieve stated goals. The Consensus Panel that developed this TIP believes that case management lends itself to the treatment of substance abuse, particularly for clients with other disorders and conditions who require multiple services over extended periods of time and who face difficulty in gaining access to those services. This document details the factors that programs should consider as they decide to implement case management or modify their current case management activities. This summary is excerpted from the main text, in which references to the research appear.

**Treatment Planning for Person-Centered Care** Neal Adams, Diane M. Grieder, 2004-12-03 Requirements for treatment planning in the mental health and addictions fields are long standing and embedded in the treatment system. However, most clinicians find it a challenge to develop an effective, person-centered treatment plan. Such a plan is required for reimbursement, regulatory, accreditation and managed care purposes. Without a thoughtful assessment and well-written plan, programs and private clinicians are subject to financial penalties, poor licensing/accreditation reviews, less than stellar audits, etc. In addition, research is beginning to demonstrate that a well-developed person-centered care plan can lead to better outcomes for persons served. \* Enhance the reader's understanding of the value and role of treatment planning in responding to the needs of adults, children and families with mental health and substance abuse treatment needs \* Build the skills necessary to provide quality, person-centered, culturally competent and recovery / resiliency-orientated care in a changing service delivery system \* Provide readers with sample documents, examples of how to write a plan, etc. \* Provide a text and educational tool for course work and training as well as a reference for established practitioners \* Assist mental health and addictive disorders providers / programs in meeting external requirements, improve the quality of services and outcomes, and maintain optimum reimbursement

**Addictions** Barbara S. McCrady, Elizabeth E. Epstein, 1999-04-15 Today, alcohol and other drug abuse scientists have access to a broad array of clinical resources that integrate a commonsensical approach to addiction treatment with science. *Addictions: A Comprehensive Guidebook* is a superb example of one such resource. Here, in one volume, is both practical and

scholarly information for alcohol and drug abuse specialists, primary care providers, clinicians, policy-makers, and others involved in programs that are geared to help those who abuse or are dependent on alcohol and other drugs. Its scope is a testament to how far drug abuse scientists and practitioners have come in defining what they do and to how they are able to do it effectively through a growing body of scientific behavioral research. Addictions is organized into seven parts that range from the prevalence of certain addictions to their identification and treatment to the social effects of these addictions. In fact, this volume contains nearly all of the basic information a professional or graduate student needs to learn about or treat substance abuse.
