Procuring Interoperability National Academy of Medicine, The Learning Health System Series, 2023-09-03 Realizing the promise of digital technology will depend on the ability to share information across time and space from multiple devices, sources, systems, and organizations. The major barrier to progress is not technical; rather, it is in the failure of organizational demand and purchasing requirements. In contrast to many other industries, the purchasers of health care technologies have not marshaled their purchasing power to drive interoperability as a key requirement. Better procurement practices, supported by compatible interoperability platforms and architecture, will allow for better, safer patient care; reduced administrative workload for clinicians; protection from cybersecurity attacks; and significant financial savings across multiple markets. With funding support from the Gordon and Betty Moore Foundation, this National Academy of Medicine Special Publication represents a multi-stakeholder exploration of the path toward achieving large-scale interoperability through strategic acquisition of health information technology solutions and devices. In this publication, data exchanges over three environments are identified as critical to achieving interoperability: facility-to-facility (macro-tier); intra-facility (meso-tier); and at point-of-care (micro-tier). The publication further identifies the key characteristics of information exchange involved in health and health care, the nature of the requirements for functional interoperability in care processes, the mapping of those requirements into prevailing contracting practices, the specification of the steps necessary to achieve system-wide interoperability, and the proposal of a roadmap for using procurement specifications to engage those steps. The publication concludes with a series of checklists to be used by health care organizations and other stakeholders to accelerate

progress in achieving system-wide interoperability.

Vibrant and Healthy Kids National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Board on Population Health and Public Health Practice, Committee on Applying Neurobiological and Socio-Behavioral Sciences from Prenatal Through Early Childhood Development: A Health Equity Approach, 2019-12-27 Children are the foundation of the United States, and supporting them is a key component of building a successful future. However, millions of children face health inequities that compromise their development, well-being, and long-term outcomes, despite substantial scientific evidence about how those adversities contribute to poor health. Advancements in neurobiological and socio-behavioral science show that critical biological systems develop in the prenatal through early childhood periods, and neurobiological development is extremely responsive to environmental influences during these stages. Consequently, social, economic, cultural, and environmental factors significantly affect a child's health ecosystem and ability to thrive throughout adulthood. Vibrant and Healthy Kids: Aligning Science, Practice, and Policy to Advance Health Equity builds upon and updates research from *Communities in Action: Pathways to Health Equity* (2017) and *From Neurons to Neighborhoods: The Science of Early Childhood Development* (2000). This report provides a brief overview of stressors that affect childhood development and health, a framework for applying current brain and development science to the real world, a roadmap for implementing tailored interventions, and recommendations about improving systems to better align with our understanding of the significant impact of health equity.

1001 Colorado Place Names Maxine Benson, 1994 When it came to labeling cities, towns, counties, crossroads, mining camps, rivers, forests, peaks, and passes, Colorado place namers looked to an array of sources for ideas. Many simply memorialized themselves and their families—Florence, Howard, Lulu City, Dacono (Daisy, Cora, and Nora combined)—or more well-known honorees—Washington, Jefferson, Lincoln, Kit Carson, Montezuma, Ouray. Some paid homage to explorers, war heroes, politicians, railroad executives, plants, animals, or landforms. Still others went for the more unusual or creative—Boreas Pass bears the name of the Greek god of the North Wind; Egnar is range backwards; Kim was inspired by the Rudyard Kipling novel; Artesia was renamed Dinosaur in 1965 to capitalize on tourist traffic headed to nearby Dinosaur National Monument; Almont was named for a horse, Gulnare a cow. In *1001 Colorado Place Names*, Maxine Benson

scrutinizes the most popular, interesting, and unique place names in the state. She discusses how the chosen names originated and what changes they have undergone. Included are Colorado's 63 counties, 716 past and present settlements, and 56 fourteeners (peaks more than 14,000 feet in elevation) along with other places known for their historical, geographical, geological, or onomastic significance. Benson also provides pronunciation of unusual names, county locations, post office dates, population figures, and anecdotes galore. The result is a mosaic of information of Colorado history, ethnicity, families, events, politics, settlement patterns, and local lore. Combining previous place-name research and new findings, Benson takes us on a colorful, entertaining, and educational journey through cities and towns, across the plains, and over the mountains.

Health Psychology Edward P. Sarafino, Timothy W. Smith, 2020-05-07 Ed Sarafino and Timothy Smith draw from the research and theory of multiple disciplines in order to effectively demonstrate how psychology and health impact each other. The newly updated 9th Edition of *Health Psychology: Biopsychosocial Interactions* includes a broader picture of health psychology by presenting cross-cultural data. Furthermore, international examples are also included to further explore the psychologist's perspective of health issues around the world and highlight what works in the field. The psychological research cited in the text supports a variety of behavioral, physiological, cognitive, and social/personality viewpoints. An emphasis on lifespan development in health and illness is integrated throughout the text.

Serial Reports on Start-up Experiments J. Chernick,1955

Mathematics for the Physical Sciences Leslie Copley,2015-03-30 The book begins with a thorough introduction to complex analysis, which is then used to understand the properties of ordinary differential equations and their solutions. The latter are obtained in both series and integral representations. Integral transforms are introduced, providing an opportunity to complement complex analysis with techniques that flow from an algebraic approach. This moves naturally into a discussion of eigenvalue and boundary value problems. A thorough discussion of multi-dimensional boundary value problems then introduces the reader to the fundamental partial differential equations and “special functions” of mathematical physics. Moving to non-homogeneous boundary value problems the reader is presented with an analysis of Green’s functions from both analytical and algebraic points of view. This leads to a concluding chapter on integral equations.
